Professional Summary

Full Stack Developer with **3+ years of professional experience** designing and building **scalable backend APIs** and **cloud-ready web applications** using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**. Strong proficiency in **backend development with Node.js**, including RESTful API design, microservices architecture, database modeling, and performance optimization. Experienced in writing **clean, maintainable, and testable code**, improving system reliability, and collaborating effectively with cross-functional teams in agile development environments.

Technical Skills

- Languages: JavaScript, TypeScript, Python, PHP
- Backend: Node.js, Express.js, Socket.IO, Loopback 4 Framework, GraphQL
- Frontend: ReactJS, Redux, Material UI, Bootstrap, Tailwind CSS
- Databases: MySQL, MariaDB, PostgreSQL, MongoDB
- DevOps & Tools: AWS (EC2, S3, Lambda, RDS), Docker, Jenkins, Git (GitHub, GitLab)
- Other Technologies: Redis, RabbitMQ, Selenium

Professional Experience

Full Stack Developer – Gateway Group of Companies,

AutoDAP | Dec 2021 – Present

Project 1: VISOE (Data-as-a-Service Platform)

- Designed and developed **VIN-based Data-as-a-Service (DaaS) REST APIs** delivering accurate **vehicle and automotive parts data** for the **European market**.
- Built **scalable backend services** using **Node.js (LoopBack with TypeScript)** following modular and service-oriented architecture principles.
- Optimized **MySQL database performance** through efficient query design, indexing, and schema optimization.
- Improved API response times and system throughput using **Redis-based caching**, **asynchronous processing**, and background job handling.
- Integrated **React.js user interfaces** for seamless API consumption and improved user experience.
- Successfully delivered **production-grade VIN-based APIs** used by multiple European automotive brands.
- Improved backend performance and reliability through **Redis caching and optimized database queries**.

Project 2: Bandel Automobiltechnik GmbH (Automotive Solutions Platform)

- Developed and maintained **end-to-end full stack features**, contributing to both **backend services** and **frontend user interfaces** for an automotive solutions platform.
- Built **scalable backend APIs** using **Node.js and Express.js**, implementing core business logic, data validation, and secure integrations.
- Designed and optimized **databases (MySQL)** to support high-volume automotive data and ensure data consistency.
- Implemented **authentication and authorization** using **JWT** and **role-based access control (RBAC)**.
- Developed responsive and reusable **frontend components using React.js**, ensuring seamless API integration and improved user experience.

Key Achievement:

- **Champion Award (AutoDAP)**: Recognized for consistent high performance, ownership, and key contributions to the VISOEAE product.

Internship Experience

Frontend Developer Intern – Mindlabs Media (Devloops LLC) | May 2021 – Jun 2021

- Developed **responsive UI components** and delivered a fully functional **e-commerce website using WordPress**, including **customized admin panel** for content and product management.

Projects

Buyers.com – MERN Stack E-commerce Platform

- Developed a **full-stack MERN e-commerce application** for electronic products featuring **secure authentication, product and order management, and PayPal payment gateway integration**.
- Implemented **RESTful APIs using Node.js and Express.js**, with **MongoDB** for data storage and efficient query handling.
- Built responsive **React.js user interfaces** to enhance user experience and streamline checkout workflows.

Achosenson – Full Stack Application

- Developed **backend services** for an **astrology services platform** using **Node.js and Express.js**, handling core business logic and API integrations.
- Built a **responsive admin panel** with **role-based access control (RBAC)** to manage users, services, and content securely.
- Ensured secure authentication and authorization using **JWT-based access control**.

TinyBee.Toys – MERN Stack E-commerce Platform

- Designed and developed a **full-stack MERN-based e-commerce platform** for toy retail, implementing **user authentication, product catalog management, and PayPal payment integration**.
- Created reusable **React.js components** and optimized backend APIs for performance and scalability.
- Integrated secure payment workflows and order management features.

Payment Integration Module – Node.js

- Designed and implemented a reusable **Node.js payment integration module** supporting **Razorpay** for secure and reliable online transactions.
- Handled **payment verification, callbacks, and error scenarios**, ensuring compliance with payment gateway best practices.
- Built modular and configurable services to support integration across multiple applications.

Education

- **Bachelor of Engineering in Computer Engineering**
G H Patel College of Engineering and Technology (GCET), Anand
2018 – 2022 | CGPA: 8.17 / 10
- **Higher Secondary Education (Science)**
Parth School of Science and Competition, Vadodara
Percentage: 80%
- **Secondary School (SSC)**
Jai Ambe Vidyalaya, Vadodara
Percentage: 88%

Certifications

- Programming for Everybody (Python)
- Python Data Structures
- Using Python to Access Web Data
- Using Databases with Python
- Capstone: Retrieving, Processing, and Visualizing Data with Python
- Building Web Applications in PHP
